- 10) Plumbing Diagram
- 11) Ozone Cell parts Diagram
- 12) Warranty Card

System Overview

The Eco-Logic Pond and Lake Restoration Systems are designed to aerate a body of water with a controlled combination of air and ozone.

Ozone, a natural occurring form of oxygen, sometimes known as activated oxygen, is a powerful short-lived oxidant, which is primarily used to disinfect drinking water.

Ozone and air are diffused into the lake bottom by means of a patented sinkable hose consisting of hundreds of openings, which release the aeration mixture into the lake bottom. This process begins to circulate stagnant, decaying matter on the bottom of the lakebed and begins breaking up the stratification of the lake's surface water while increasing the lake's concentration of dissolved oxygen.

Safety:

Ultraviolet rays produced inside the ozone cell of this unit are harmful to eyes and skin. Never operate this unit with the ultraviolet lamp exposed or removed from the ozone chamber.

The ozone generator should be installed in a properly ventilated equipment area with accessibility restricted to authorized personnel only.

The ozone gas produced by this system is very corrosive; therefore it is advisable to check for any possible leaks in the hoses, which inject this gas into your pond to insure ozone gas is only exiting under water.

Eco-Logic Unit Specifications / Equipment Installation Recommendations:

Model 4:

a) CFM of Unit:	4 CFM
b) Maximum PSI of Unit:	15 PSI
c) Maximum Depth of Pond:	34 Feet Deep
d) Maximum Surface Area Size:	1 Acre or 43,560 Square Feet
e) Physical Sizes of Unit:	36 1/4" x 12 1/8" x 18"
f) Recommended Accessories:	100 ft. of feeder tubing (270008) 250 ft. of 3" aeration tubing (270009) (2) Plug connector (271525) (1) Tee connector (271538) (6) Hose clamps (271542)

Equipment Installation Recommendations:

- 1) Electrical Power Required:
Model 4: 700 Watts or 6 Amps
- 2) Location Selection:
 - a) Units should be installed in a properly ventilated area.
 - b) The unit's front panel should be accessible as well as the lamp access cover for lamp removal.
 - c) Air intakes on the bottom of unit should be a minimum of 12" off the floor.
 - d) For wall mounting, select a vertical structure, which will support the unit.
 - e) Floor mounts should be bolted to a cement pad.
 - f) For outside installations, if possible, locate the unit out of direct sunlight, keep the unit away from any sprinkler path and away from the green.
- 3) Installer:
 - a) Follow all local and state electrical codes to choose the correct wire size for length of run and wire protection.
 - b) Review Guidelines of Aeration Tubing Installation located in this manual.

Recommended System Maintenance:

Maintenance recommendations listed below are based upon a normal installation. Maintenance requirements may vary from site to site depending upon unit used and installation environment.

1) Compressors:

We recommend compressor vanes be replaced at least once per year of operation. (See Price Schedule for specific part number and cost for the Compressor Vane Kits).

2) Aeration Tubing:

Aeration tubing should be cleaned off with a rag if flow ever appears non-uniformed on the Pond's surface. This can be done by removing the tubing from the pond and wiping off the tubing. This task can be performed from either on shore or on board a boat.

3) Ozone Cell Lamp:

We recommend that the lamp be replaced every 10,000 hours of operation. (See Price Schedule for specific part number and cost for the Ozone Cell Lamp).

4) Electrostatic Air In-Take Filter:

We recommend the filter be inspected once every 30 days for dirt build-up. The filter can be cleaned using soap and water. Replacement is necessary when cleaning the filter can no longer be achieved or the filter material breaks down. (See Price Schedule for specific part number and cost for the In-Take Air Filter).

INSTALLATION INSTRUCTIONS FOR YOUR AERATION TUBING

Your Eco-Logic Pond Bubbler has been supplied with carefully engineered tubing to provide maximum efficiency and long life. As with all engineered products, **INSTALLATION INSTRUCTIONS** must be carefully followed for proper results.

While the installation instructions for your Aeration Tubing are simple and straight-forward, attention to detail will insure many years of trouble free service and operation.

TUBING PROFILE

The Aeration Tubing and the Feeder Tubing provided with your Eco-Logic Pond Bubbler are specifically designed products that are formed with a lead weight cord inside its dual tube profile to provide a means of preventing it from floating.

The tubing and the lead weight can both kink easily so care must be taken when handling to prevent the tube from being damaged. The tubing is easily crushed as well. **DO NOT** step or walk on these products.

GENERAL INSTRUCTIONS:

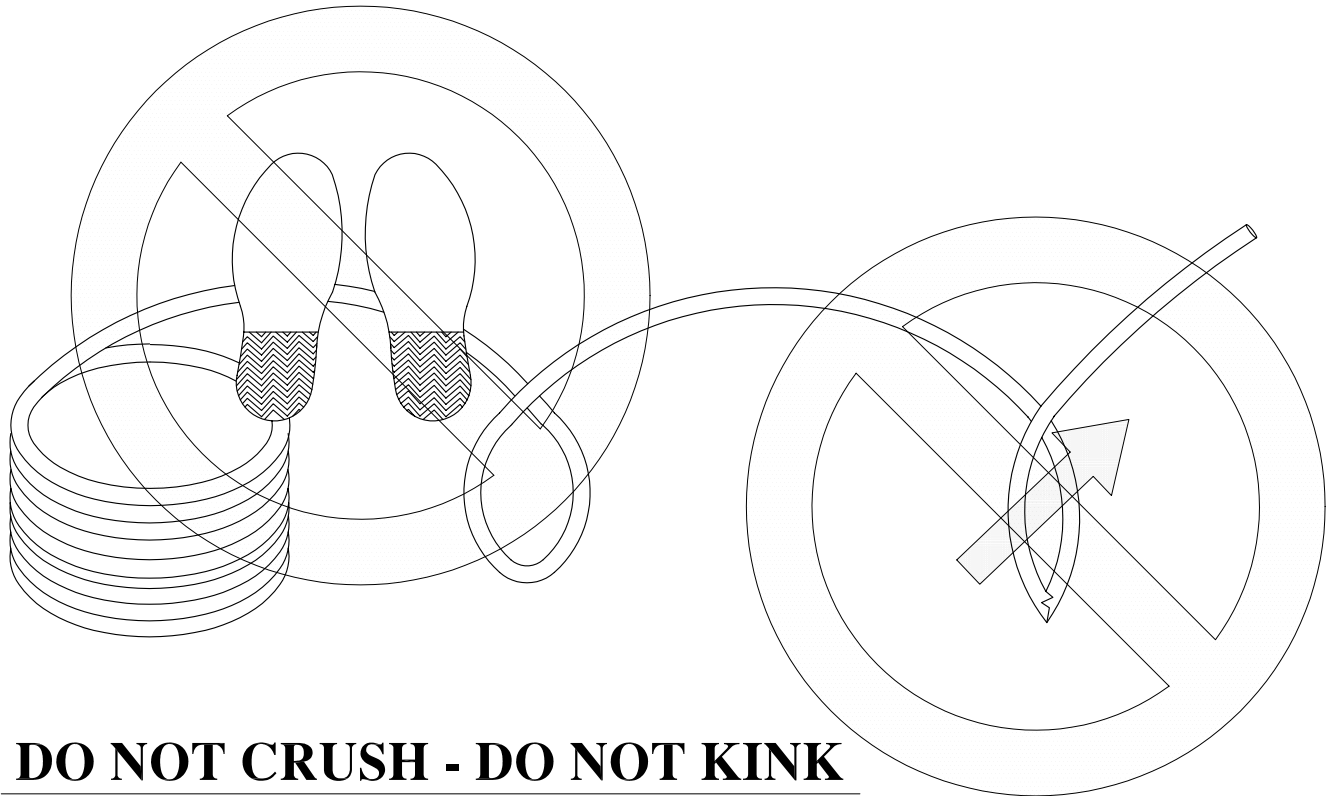

- 1) When handling the tubing **DO NOT PULL** the Aeration or Feeder Tubing from the roll. This will cause twists or kinks in the lead keel. Instead unroll the tubing as if it were wound on a spool having an assistant lead the end away from you as you allow the roll to pay off from the outside of the bundle.
- 2) While assembling the Aeration system avoid allowing dirt or dirty water to enter the tubing or its components.
- 3) The fittings should slip into the aeration tubing with very little effort. If insertion of the fittings is difficult, allow the tubing to sit in a warm area for several hours before starting your assembly.

ASSEMBLY

- 1)
 - A. Unroll The Feeder Tubing. Use the method described in the general instructions, DO NOT PULL TUBING FROM THE TOP OF THE COIL. Pulling the tubing from the top of the coil will cause kinking.
 - B. Cut the end of the tubing evenly, so that you have a square end.
 - C. Remove one half an inch of the lead keel section from the square cut end.
 - D. Attach this first end to the output fitting located on the bottom panel of the Eco-Logic enclosure. Secure the tube onto the fitting with the clamp provided.
 - E. Cut the tubing to the desired length for your installation. Factory recommendations are to form a "T", the Feeder Tube being the leg of the "T" and the Aeration tubing creating the top cross of the "T"
 - F. Remember to remove one half an inch of the keel segment at each finished end of these tubes to provide clearance for the tubing clamps.
- 2)
 - A. Unroll the Aeration Tubing following the same procedure as described in item 1 above and in the general instructions.
 - B. When Forming a "T" layout for the Feeder Tube and Aeration tube cut the Aeration Tube in half and prepare each end by removing one half an inch of the lead keel. Remember to cut each end of the tubing evenly, so that you have a flat end.
 - C. Slide a tubing clamp over each finished tube end and insert the tubing ends into the Tee Connector. Tighten each clamp to secure the tubes to the Tee.

ASSEMBLY (continued)

- D. Insert the end plugs into each half of the Aeration Tube to cap the open ends and secure the plug with the tubing clamps provided.
- E. After the assembly of the Feeder Tube and Aeration Tube has been completed it can be laid into your pond or lake.
- F. Carefully stretch out the Tubing assembly across the pond taking precautions not to kink, bend or crush the assembly. The Feeder Tube should be laid out first to bring your Aeration branches nearer to the center of the pond. The Aeration branches can then be laid out to span the greatest distance their lengths will allow.
- G. The use of a small boat is quite helpful when arranging your Aeration assembly in your pond.

DO NOT CRUSH - DO NOT KINK

AERATION ASSEMBLY COMPONENTS

ITEM NO.	ITEM DESCRIPTION	PART NUMBER
1	Aeration Tubing	270009
2	Feeder Tubing	270008
3	Tee Connector	271538
4	Straight Connector	271541
5	Tubing End Plug	271525
6	Tubing Clamp	271542

ECO-LOGIC POND BUBBLER SYSTEM

TUBING LENGTH REQUIREMENTS

MODEL	FEEDER TUBING (2)	AERATION TUBING (1)
4	100 FT.	250 FT.
10	100 FT.	500 FT.
17	100 FT.	1000 FT.

SUGGESTED TUBING LENGTHS AND ASSEMBLY FOR OPTIMUM EFFICIENCY.
(REFER TO COMPONENTS LISTING ON PAGE 4 FOR PART DESCRIPTIONS.)

Consult the factory for optional tubing layouts and Eco-Logic accessories or replacement parts.

24" RECOMMENDED MINIMUM CLEARANCE FOR LAMP REMOVAL

FRONT VIEW

(SHOWN WITH COVER REMOVED)

SIDE VIEW

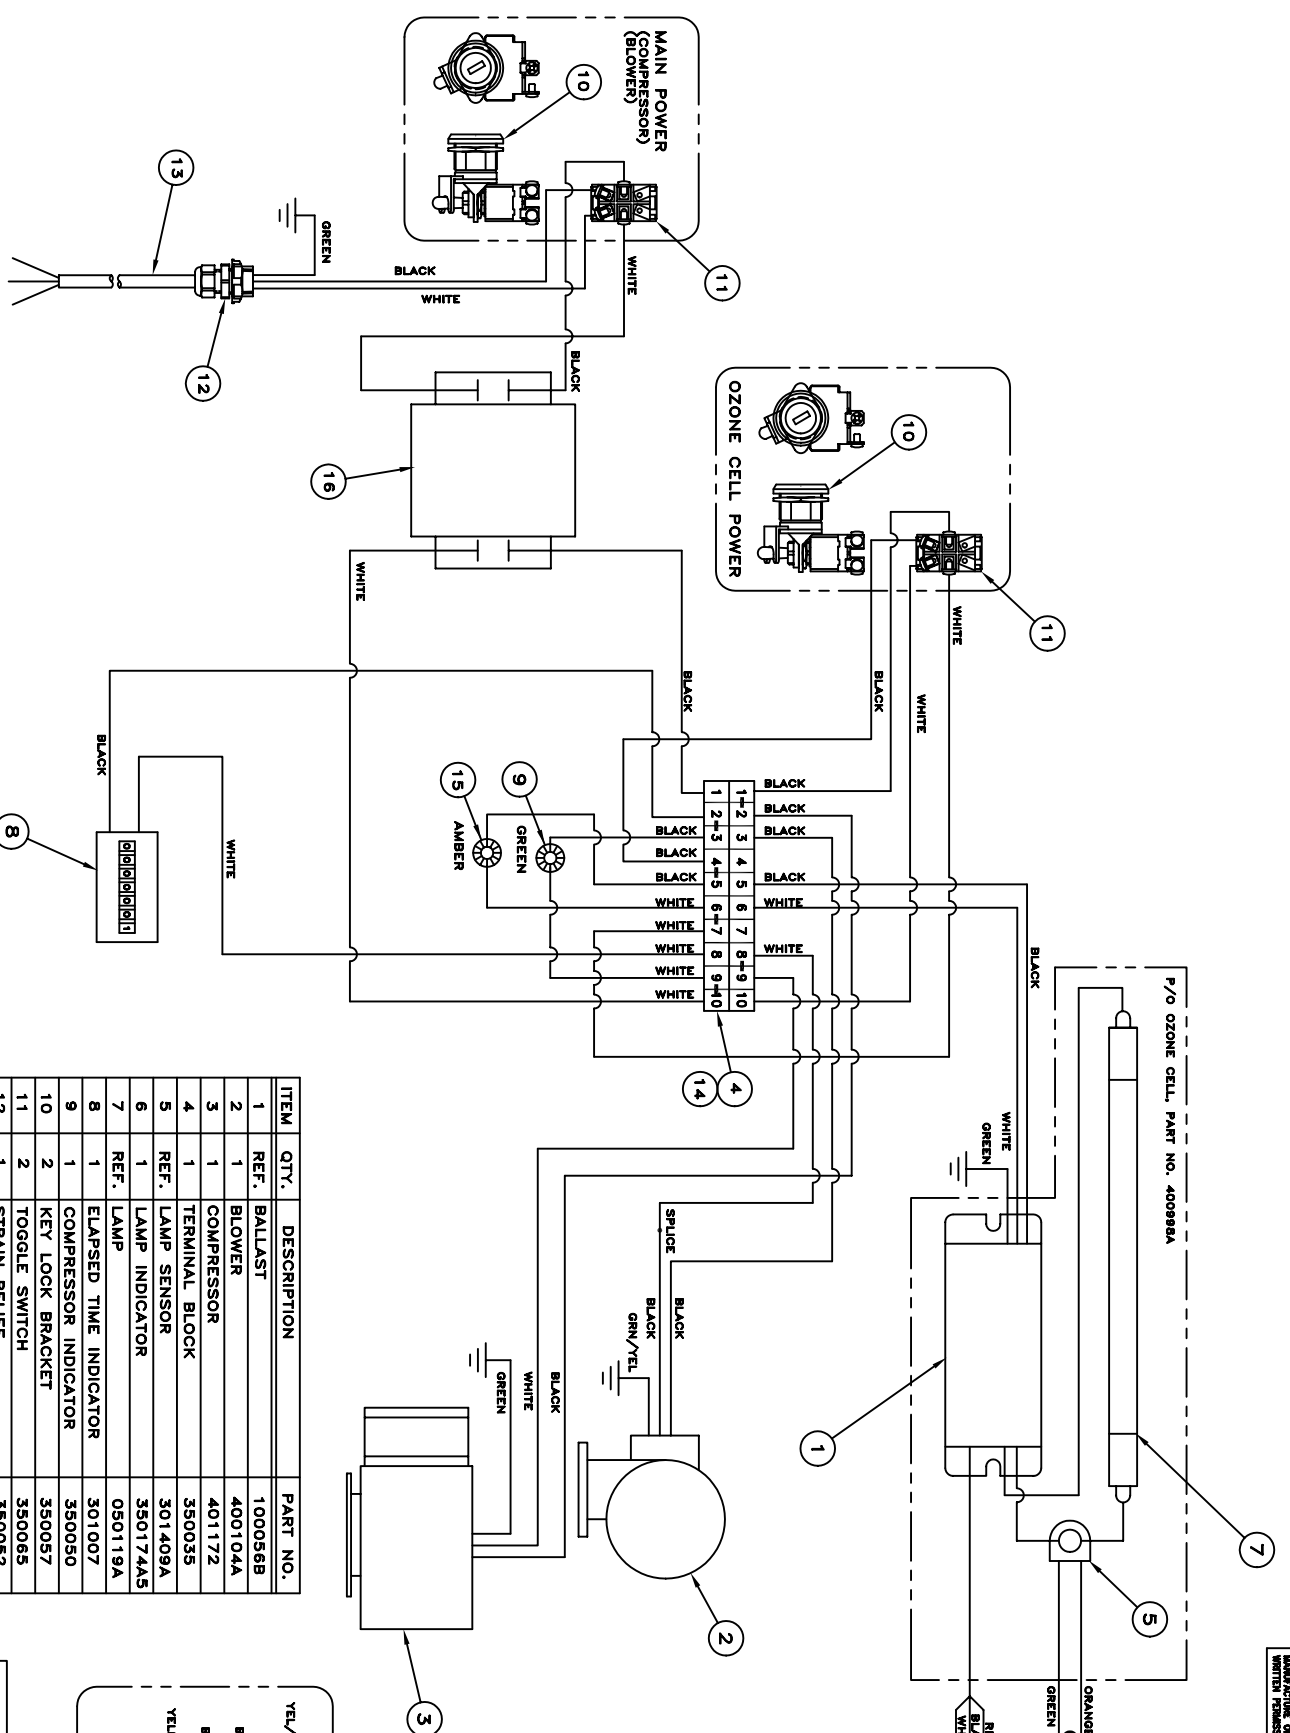

NOTES:

- A) ENCLOSURE AND COVER ARE CONSTRUCTED OF STAINLESS STEEL TYPE 304. COVER IS SECURED TO ENCLOSURE WITH #8-32 SCREWS. TAMPERPROOF SCREWS ARE AVAILABLE AS AN OPTION.
- B) UNIT UTILIZES (1) GERMICIDAL OZONE PRODUCING LAMP, INSTANT START, WITH A RATED EFFECTIVE LIFE OF 10,000 HOURS.
- C) UNIT EMPLOYS KEY LOCK SWITCHES TO INSURE TAMPERPROOF OPERATION FOR EITHER AERATION ALONE OR AERATION WITH OZONE.
- D) ELAPSED TIME INDICATOR PROVIDES A VISUAL INDICATION IN HOURS OF TIME THAT UNIT IS IN SERVICE.
- E) CONTINUOUS DUTY COMPRESSOR PRODUCES UP TO 4 CUBIC FEET PER MINUTE OF AIR FLOW.
- F) A DIMMABLE ELECTRONIC BALLAST IS USED TO CONTROL THE INTENSITY OF THE OZONE LAMP, IF REDUCED OZONE OUTPUT IS REQUIRED.
- G) PERMANENT, WASHABLE, ELECTROSTATIC AIR FILTER PREVENTS PARTICULATE MATTER FROM ENTERING INTO INTERIOR OF UNIT.
- H) UNIT IS CONSTRUCTED WITH (4)-5/16" MOUNTING HOLES ON REAR WALL OF ENCLOSURE FOR WALL MOUNTING. AN OPTIONAL FLOOR MOUNTING BRACKET IS ALSO AVAILABLE FROM THE FACTORY. (PN# 401181A)
